

# 2019 Fall Corn Residue Not Tilled

**Statewide, a total of 71% of corn acres (3,580,000) had residues and soils undisturbed during the fall and winter months.**

Residue not tilled after corn harvest (% of acres)

Due to the COVID19 pandemic, some transect surveys were not completed in the interest of protecting the health and safety of our conservation partners. These incomplete surveys were supplemented using 5-year averages.

Cropland acreages calculated from 2019 NASS Cropland Data Layer.

\*Windshield surveys were conducted between November 2019 and April 2020, and therefore do not reflect residues that are disturbed outside of said timeframe. See SPRING tillage transect results at <https://www.in.gov/isda/2383.htm>
